

# **Jawaharlal Nehru Port Container Terminal selects N4 Terminal Operating System**

## **Navis N4 will help Terminal Increase Capacity and Improve Productivity**

The Jawaharlal Nehru Port Container Terminal, one of the container terminals directly managed by India's leading container port-JNPT, is constantly innovating and up-scaling operations to not only meet but exceed global benchmarks with an underlying commitment to provide seamless customer service and ease of doing business. The JNPCT has upgraded its terminal operating system to SPARCS N4 platform to optimize the terminal's operational cycle with the ultimate goal to increase JNPCT efficiencies so that customers can experience improved productivity.

The JNPCT has taken a number of initiatives for faster and economical operations along with automation that has helped in streamlining the processes and helping in reduction of cost, time and documents and thus making it easier for clients and partners to do business with them. The decision of migration to Navis N4 TOS solution is one of the step towards achieving the objective.

The N4 implementation process will be managed by Cargotec Corporation and will directly work with JNPCT, utilizing Navis' methodology and project management tools. Cargotec will provide configuration, testing, report and field extensions, go-live support services, including training courses so that the management and mid-management teams are up and running on N4 as quickly as possible.

The JNPT is confident that this new platform will help us achieve the desired productivity and growth goals through optimized operations on a modern platform.

JNPT team at the Inauguration of “Migration of JNPCT-Terminal Operating System to SPARCS N4 Platform”
